

Work Better with Marratech Version 6

New functions and enhancements make Marratech® the most complete cross platform web conferencing solution:

- Cross platform support for H.264 video standard gives superior video quality.
- Full screen video option.
- Moderator function gives complete control to the meeting moderator.
- Enhanced application sharing.
- Automated interface for private chat.

It moves essential personal and business collaboration into a secure, Internet-based environment. Your people can attend meetings with no travel time or expense, no conference costs and no fixed meeting room overhead.

Your meetings, including speech and documents, are totally secure thanks to built-in end-to-end encryption, and you can even have a private conversation without leaving the room or interrupting the meeting.

The screenshot displays a web conferencing session. On the left, a Microsoft Excel spreadsheet titled 'Sales Results.xls' is shared, showing a table with columns for regions (Central, East, West) and quarters (Q1, Q2), and a bar chart below it. A callout box labeled 'Whiteboard' points to the spreadsheet, stating: 'Present your information and receive feedback via annotations in text or diagrams that can be saved for future reference'. Another callout box labeled 'Voice over IP' points to the spreadsheet, stating: 'Low delay, crystal clear voice. Talk to the entire group or privately to individuals'. On the right, a video feed shows a woman speaking, with a callout box labeled 'Video' stating: 'See who's talking and enhance impact of meeting'. Below the video, a grid of smaller video thumbnails shows other participants, with a callout box labeled 'Participants' stating: 'See who is in the meeting and interact with them'. At the bottom right, a chat window is visible, with a callout box labeled 'Instant Message' stating: 'Send messages and exchange information with the entire group or on a private one-to-one'. A blue callout box labeled 'Significant increase!!' points to a data point in the spreadsheet's bar chart.

Marratech enables you to hold group meetings or conferences on the web, face-to-face, on demand, whenever you want and wherever you or your colleagues may be.

You can see and talk to each other, and share applications and documents without having to be in the same room, the same building, or even the same country.

Join your Marratech meetings direct from your web browser with MeetNow! – you don't even need to download any software to your computer.

Multi platform support

Marratech works on your existing laptops or PCs running either Mac, Linux or Microsoft Windows.

Dial out from your meeting

Call land line, mobile or VoIP phones direct from Marratech to connect with people who have no computer or Internet access.

Best voice quality

All participants enjoy exceptional voice quality with real time video and everyone can record and play back the entire meeting.

Firewall friendly

Marratech supports connections through network address translation (NAT) firewalls, enabling, for example, both home and corporate users to connect through the Internet.

Marratech's interactive whiteboard

You can upload images, documents, live camera snapshots, presentations and other application windows to your Marratech whiteboard, all while talking to and viewing others in your meeting.

Use tele-pointers, highlighters, colors, and other tools to explain, emphasize, and annotate ideas and results.

Share applications

Marratech allows you to share any application with the rest of the group and dynamically work within it, sharing information in real-time across Windows, Mac and Linux systems.

You can allow another participant to work in your document while retaining the option to cancel their access.

Video

You and your colleagues can see each other in real time using web cameras. Video dramatically increases the sense of presence and completes the Marratech virtual workplace. H.264 gives high quality video on Windows, Linux and Mac at substantially lower bit rates than other systems still relying on earlier standards. Users can switch to full screen video, opening web-based conferencing to image critical applications such as remote medical diagnosis and university science research projects.

Recording and playback

Marratech can record all media (voice, video, whiteboard and chat) and index your recordings. You can easily record your meetings or lectures, play them back later, or send them to others.

Chat

Use Marratech's text message facility for informal notes with all participants. Use it to gather or post questions, clarify names, spelling, web links and e-mail addresses.

Private chat

Private chat allows you to send messages or talk to an individual participant without disturbing others in the group.

Get Marratech - Free

If you want Marratech directly on your computer rather than launching it from your browser, or if you have restricted access to automatic Web downloads, you can manually download it free to any current laptop or PC. Just go to www.marratech.com, select 'MeetNow!' and choose the 'Downloads' option.

Any number of users can join Marratech web meetings. All they need is a headset and optional webcam. Your organisation's web conferencing rooms are configured in a licensed Marratech Manager on your company server.
